

YOUSSEF ALKHRISAT

Senior Backend Engineer & Product Collaborator

Amman, Jordan · yousef.alkhrissat@gmail.com · +962 7 9377 3311 · [linkedin.com/in/yousef-alkhrissat](https://www.linkedin.com/in/yousef-alkhrissat) · [website](#)

PROFESSIONAL SUMMARY

Senior Backend Engineer with 6+ years of experience architecting highly scalable APIs, microservices, and real-time platforms using NestJS, TypeScript, Laravel, and AWS. Proven track record of bridging the gap between business intent and technical execution, validating product requirements to minimize wasted development effort and maximize feature adoption. Brings hands-on QA automation experience (Selenium Java, Postman, JMeter) and a track record of training QA engineers on automation, performance, and manual testing practices, reinforcing a quality-first approach to backend delivery. Experienced leading distributed teams across US, EU, and MENA time zones. Fluent in English and eligible for the EU Blue Card.

CORE SKILLS

- ▶ **Backend:** Node.js, NestJS, Express.js, PHP Laravel, TypeScript, JavaScript
- ▶ **Frontend Collaboration:** React.js
- ▶ **Databases:** PostgreSQL, MySQL, MongoDB, Oracle
- ▶ **Caching / Messaging:** Redis, RabbitMQ
- ▶ **Search / APIs:** GraphQL, Elasticsearch, REST APIs, WebSockets
- ▶ **Cloud / DevOps:** AWS, DigitalOcean, Oracle Cloud, Docker, Linux, Nginx, Apache
- ▶ **QA Automation & Testing:** Selenium (Java), Postman, JMeter, automation/performance/manual testing training
- ▶ **Practices:** Microservices, Event-Driven Architecture, CI/CD, Multi-Tenant Systems

PROFESSIONAL EXPERIENCE

Senior Back-End Developer — Axelerated Solutions Apr 2025 – Present

Amman, Jordan

- Architected multi-tenant backend infrastructure using NestJS and Asterisk, ensuring strict data isolation while optimizing system resource allocation across diverse client environments.
- Collaborated directly with product and business stakeholders to audit feature requests, preventing implementation of low-utility requirements and aligning engineering effort with core user workflows.
- Engineered real-time call-state tracking using Redis TTL and session strategies, significantly reducing database query overhead and improving platform reliability during peak traffic.
- Streamlined event-driven processing by integrating RabbitMQ and MySQL, enabling scalable, decoupled microservices capable of processing high-volume telecom data with minimal latency.
- Led a modular system redesign across VoIP, Ticketing, and Social modules, prioritizing clean architecture and technical-debt reduction to accelerate future feature deployment.
- Trained QA engineers on automation, performance, and manual testing practices, strengthening the team's overall quality assurance capability.

Senior Fullstack Software Engineer — UBA (United Business Applications) May 2024 – Dec 2024

Amman, Jordan

- Developed core backend features and React modules for high-volume procurement SaaS platforms, ensuring clean alignment between client workflows and system capabilities.
- Built high-performance GraphQL APIs and optimized data retrieval pipelines using Elasticsearch and Redis.
- Reduced API response times by 30% across the platform through strategic backend and database query optimization.
- Designed decoupled microservices architecture utilizing RabbitMQ messaging to isolate heavy transaction loads.

Fullstack Software Engineer — Baaz Nov 2023 – May 2024

Amman, Jordan • Role ended due to company shutting down regional platform operations

- Engineered scalable backend and frontend features for a high-concurrency social platform using REST and GraphQL APIs.
- Improved application scaling and data availability by implementing Redis caching layers and optimizing Elasticsearch indices.
- Maintained complex PostgreSQL and MongoDB data models, ensuring data integrity across fast-evolving user features.

Senior Software Engineer — Hello World Kids Feb 2023 – Nov 2023

Amman, Jordan

- Conceived and architected an interactive coding-platform feature (modeled after LeetCode) to gamify the learning experience and dynamically evaluate student code submissions in real time.
- Led backend development using Laravel on AWS, ensuring the platform could safely execute and evaluate student scripts asynchronously using isolated infrastructure.
- Implemented RabbitMQ message queues to process heavy asynchronous code-evaluation workloads, maintaining sub-second responsiveness during peak classroom hours.

Senior Software Engineer — Rhinosoft Feb 2022 – Nov 2022

Amman, Jordan

- Resolved a critical DHL international shipping bottleneck for Zalatimo.com by architecting a dynamic, locale-triggered calculation matrix (Fixed Fee × Weight), bypassing rigid third-party billing constraints.
- Developed robust Node.js microservices using NestJS and Express, scaling system architecture with MongoDB, Redis, and RabbitMQ.
- Led code reviews and mentored junior engineers, instilling a product-first approach to writing maintainable backend code.
- Trained QA engineers on automation, performance, and manual testing practices to raise the team's testing maturity.

Software Engineer — Luminus Education Group Nov 2021 – Feb 2022

Amman, Jordan

- Developed internal systems using the Node.js stack, automating business processes and delivering platform features that improved operational workflows.

Software Engineer — Aspire IT Services Nov 2019 – Nov 2021

Amman, Jordan

- Served as a foundational technical and business strategist for the creation of EPIC Academy, defining both the product's functional architecture and underlying business software specifications.
- Engineered core full-stack systems using NestJS, Express, and React, translating business blueprints into scalable educational workflows.
- Designed robust PostgreSQL and MongoDB schemas alongside Redis/RabbitMQ workflows to support high-concurrency real-time classroom interactions.
- Performed QA automation using Selenium (Java) for regression testing and Postman/JMeter for API and load testing, supporting release quality across the platform.

Software Engineer — NCIT Solutions Feb 2019 – Nov 2019

Amman, Jordan

- Developed applications using Node.js, React, and NestJS, building real-time features using WebSockets and Redis.

EDUCATION

Associate's Degree in Computer Technology

Al Balqaa Applied University — Zarqa, Jordan | 2015 – 2019
